

Drinking Systems

Nipple Drinking Technology

For Turkeys Brood/Finish

Lubing's all-new EasyLine™ Nipple Drinking System is the breakthrough in turkey drinking technology that turkey growers have long been waiting for. The following components make up the recipe for your success. Then, Just Add Water!

EasyLine Cup - Brood/Hen Finishing

The EasyLine cup for brood and hen finishing is designed to deliver the proper amount of water to the birds from day one through every stage of their life. Water is delivered into the cup by means of the pendulum. The size of the oval cup provides easy access to the young poults and is designed to keep the litter dry during grow-out.

EasyLine Cup - Tom Finishing

The EasyLine cup for tom finishing is designed to handle the aggressive behavior of larger birds. An optimal supply of water is provided to the cup through the pendulum. The design of this cup is larger in diameter to help reduce the possibility of water spillage and improve litter conditions through out the building.

Pressure Regulator

The Lubing pressure regulator has built-in flushing capabilities with the simple twist of a knob. Water pressure is easily adjusted with the regulator knob located underneath the unit. The clear flexible standpipe with float ball offers accurate and precise water pressure adjustment.

Flush Breather Unit

The flush breather unit incorporates a clear flexible standpipe and float ball for establishing an accurate water pressure adjustment and also includes hose attachments for automatic flushing and cleaning.

The principle of the pendulum

At the heart of the system are the patented pendulum and turkey nipple. As the birds drink from the cup, their heads move the pendulum from side to side, thus triggering the nipple. The valve in the nipple opens and water flows through the pendulum into the cup. When the drinking system is at the proper height the feathers on the neck of the bird will keep the edge of the cups clean.

The EasyLine System offers the following benefits over conventional watering systems:

- Fresher supply of water to the birds
- Better litter conditions
- Improved air quality
- Healthier birds
- Higher liveability rates

Recommended number of birds/nipple

- Brooding: 30-40
- Tom finishing: Approx. 20
- Hen finishing: 25-30

Versions of 10' sections

- Brooding or Hen Finishing:
3, 4, 5, and 6 drinkers/section

Versions of 10' sections

- Tom Finishing:
3, 4, and 5 drinkers/section
