

Fan Covers

Gable End & Ridge Fan Covers

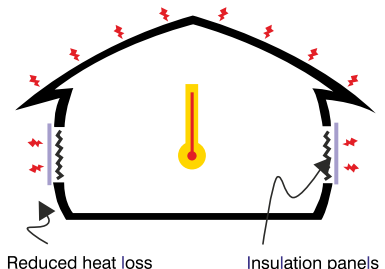

Our Gable End Fan Covers help conserve the energy that is used in poultry houses for brooding.

During the winter months many poultry growers experience the value of wall and roof insulation, but every poultry house needs ventilation openings such as fans which are left poorly insulated. With increasing fuel prices, the need to eliminate heat losses is a key area that requires special attention. When extreme outdoor conditions influence the indoor environment, bird welfare can suffer greatly.

In order to prevent such costly heat losses, fans can be fitted with a simple but yet effective cover. In this way generated heat can be kept inside the building and the outside adverse weather conditions kept out.

Key Features

- Reduced heat loss through fans during winter
- Cost saving by reducing heating costs
- Reduced need to top up bedding materials
- Quick and easy to install and mount
- Fits gable fans snugly
- Can be installed on exhaust sides of fans
- Can be fitted all brands of exhaust fans with similar dimensions
- Prevents ingress of contaminants
- Reduction of wind damage to butterfly valves that are not in use
- Bespoke sizes also available

Insulated Aluminium Gable End Fan Covers

Heating the inside of a building can be very expensive, especially if a lot of the heat generated is lost through areas of poor insulation. While the fan's shutters provide an effective barrier to airflow when the fan is inactive, they do not provide an effective barrier to heat flow or heat loss. When extreme outdoor conditions influence the indoor environment, bird welfare can suffer greatly.

The vast majority of extraction fans are inactive during cold winter periods during which large heat losses occur through the ventilation opening. In order to prevent such costly heat losses, fans can be fitted with insulation panels. In this way generated heat can be kept inside the building and the outside adverse weather conditions kept out. Manufactured from extruded aluminium which is powder coated black with 25mm thick foil faced Xtratherm.

Each cover contains the necessary brackets and self tapping screws for installation.

Key Features

- Reduce heat loss by up to 7 times through the fans
- Easy to install
- Cost saving by reducing heating costs
- Can be installed on the Air Inlets or Exhaust outlet of fans
- Can be fitted to most Gable Fans
- Prevents ingress of contaminants
